The order of Part I-Index and Part II is maintained in arrest section 4.

Runaway case clearance numbers may include cases from the prior year and in some instances may exceed the number of reported offenses for a particular year in a given age group.

The 1985 runaway clearances may also indicate improved runaway case clearance reporting through agency re-contact of complainants to determine their knowledge regarding the juvenile's present location.

TABLE 20

These property classifications and values refer to property loss an recovery due to criminal acts of stealing, damaging or destroying property by acts of theft, arson or vandalism.

The number of offenses involved means the number of times the property classification was used in reporting a criminal offense and does not necessarily relate to the actual number of items taken or destroyed.

SECTION 6

AGENCY SUMMARY AND DETAIL TABLES

This section provides the following information:

1. A summary of the annual crime report information for each department and each county.
2. A detailed report by crime category of the annual crime report information for each department and each county.

The summary tables provide a comparison between 1984 and 1985 data.

The summary information is located on the upper pages and the detailed information by crime category for the same departments and counties is located on the facing lower pages.

The counties are listed in alphabetical order with all reporting departments in each county listed in alphabetical order within the county.

KEY TO FORMAT ABBREVIATIONS

OFF	The number of actual verified offenses or attempts as set forth by OUCR guidelines and definitions.
ARR	The number of arrests made during the reporting period. (Includes any arrests made during this period for offenses reported prior to 1/1/85. Includes persons cited, summoned, and notified as well as those taken into physical custody).
CLR	The number of offenses cleared by arrest or exceptionally during the reporting period. (Includes any clearances made during this time for offenses reported prior to 1/1/85). These are counts of offenses cleared, not persons arrested.

SPECIAL NOTES: When counting arrests, only those arrests which are made for an agency's own cases are counted for OUCR purposes. For example, if Agency A makes an arrest on a warrant for Agency B, Agency A does **not** count it. For this reason, the number of arrests shown in this report will not necesssarily agree with the statistics within a department which may show **all** arrest activity.

Index Crime is summarized on the upper page. The individual crimes that make up the Crime Index are each identified with an * on the lower detail page.

Part II Crime totals may be easily determined by subtracting the Index Crime total from the Crime Total located in the adjacent column on the upper page. The result of this subtraction equals total Part II Crimes.

STATISTICAL METHODS

CALCULATION OF CRIME RATES

Quite often it is desired to compare the volume of crime occurrence, either totally or by individual offense, over a period of time for a selected group of agencies or jurisdictions. The geographical area being studied will undoubtedly consist of law enforcement agencies of various strengths and serving widely varying sizes of population. An agency equalizing factor must be developed, or in other terms, a common denomintor is needed. To arrive at a valid comparison, the concept of rate is utilized.

The crime rate is defined as the number of offenses occurring per 100,000 population over a period of one year. The common denominator for any community, county, district or state is obtained by dividing the population represented by 100,000. Once this denominator is determined, it becomes a constant until such time as the population of the community, county, district or state changes appreciably. The crime rate can be calculated then by dividing the number of offenses by the denominator.

a. Population divided by 100,000 = common denominator

b. Number of offenses divided by common denominator = crime rate

EXAMPLE:

Agency A serves a population of 50,000 and experienced a total of 2,500 Index offenses in 1984.

INDEX CRIME RATE:

50,000 divided by 100,000 = 0.50 (common denominator)

2,500 offenses divided by the 0.50 = 5,000 (crime rate)

Therefore, the Index crime rate for Agency A in 1984 was 5000.0 per 100,000 population.

EXAMPLE:

Agency B serves a population of 128,750 and experienced a total of 13,500 robbery offenses in 1984.

ROBBERY RATE:

a. 128,750 divided by 100,000 = 1.2875 (common denominator)

b. 13,500 (robbery offenses) divided by the 1.2875 = 10485.4

The robbery rate for Agency B in 1984 was 10485.4 offenses per 100,000 population
